

**Model:**

Bertrand lens and analyzer attachment

Description:

Attachment for polarization observation, including Bertrand lens and analyzer filter

Optics	Bertrand lens for conoscopy observation. Swing-out type, focusable and centrable
Filters	Rotating analyzer filter, 0°-180° rotation with 0,1° vernier scale. Lever for insertion into optical path. Included retardation plates: - 1° order red (1 lambda) - ¼ lambda - Quartz wedge
Notes	Used in both transmitted and incident polarizing microscopes
